PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in AWS cloud, CI/CD automation, Docker, Docker Compose, Kubernetes,

Terraform, Ansible, GitHub Actions, and Linux administration. Skilled in designing scalable CI/CD pipelines,

infrastructure automation, containerized deployments, and monitoring solutions using modern DevOps practices. Basic

working knowledge of Python for automation scripting. Passionate about cloud-native technologies, Infrastructure as Code,

and continuous delivery.

TECHNICAL SKILLS

DevOps & CI/CD: Jenkins, GitHub Actions, ArgoCD, Git, GitHub, Maven, SonarQube, Nexus

Cloud Platform: AWS (EC2, S3, IAM, VPC, RDS, Route 53, EKS, CloudWatch)

Containers & Orchestration: Docker, Docker Compose, Kubernetes (EKS), Helm

Infrastructure as Code: Terraform, Ansible

Monitoring & Observability: Prometheus, Grafana, AWS CloudWatch

Web & Databases: Apache, Nginx, Tomcat, MySQL (Amazon RDS)

Programming & Scripting: Python (basic), Bash Shell Scripting

Operating Systems: Linux (Ubuntu, RHEL)

PROJECTS & HANDS-ON EXPERIENCE

CI/CD Pipeline for E-commerce Application

- Designed and implemented end-to-end CI/CD pipelines using Jenkins and GitHub Actions, reducing deployment time

by 40%.

- Automated AWS infrastructure provisioning (VPC, EC2 Linux servers, S3, RDS, IAM) using Terraform.
- Deployed applications on Linux servers using Ansible with Tomcat and Nginx configuration.
- Secured sensitive credentials using Ansible Vault and managed build artifacts in Amazon S3 with versioning and

replication.

- Implemented Prometheus and Grafana dashboards to monitor CPU, memory, disk usage, and application availability.
- Wrote basic Python and Bash scripts to automate log cleanup and health-check tasks across servers.
- Successfully delivered a fully automated CI/CD pipeline for an e-commerce application, enabling faster, secure, and

reliable deployments with continuous monitoring and infrastructure automation.

Containerized Application Deployment with Kubernetes

- Automated AWS EKS cluster creation using Terraform and managed Linux-based container workloads.
- Containerized microservices using Docker and orchestrated multi-container local environments using Docker Compose

for consistent development and testing.

- Implemented Helm charts and GitOps-based deployments using ArgoCD.
- Configured Horizontal Pod Autoscaler (HPA) for automatic scaling based on demand.
- Implemented Kubernetes namespaces, RBAC, and resource quotas for secure workload isolation.
- Configured Prometheus and Grafana dashboards for real-time monitoring of Kubernetes workloads and cluster nodes.
- Successfully deployed a scalable, secure, containerized application on Kubernetes with continuous monitoring and self-

healing capabilities.

CI/CD Automation with GitHub Actions and Docker Compose

- Built automated CI/CD workflows using GitHub Actions to run build, test, and Docker image push stages on every

commit.

- Defined multi-service application stacks (app, database, reverse proxy) using Docker Compose for local development

and quick environment replication.

- Used basic Python scripts for pipeline utility tasks such as parsing logs and validating configuration files before

deployment.

- Reduced manual deployment steps by integrating automated image builds and container registry pushes directly into

the GitHub Actions workflow.

CERTIFICATIONS

- DevOps Engineering Certification – Naresh IT Institute

EDUCATION

Bachelor of Technology (B.Tech) — 8.03 CGPA

Sir C R Reddy College of Engineering (2025)

STRENGTHS

- Strong problem-solving and analytical thinking
- Effective communication and collaboration
- Quick learner and adaptable to new technologies
- Good time management and task prioritization

Job Description:

Design, implement, and maintain CI/CD pipelines using Git-based workflows, enabling automated build, test, and deployment processes across environments.

Apply strong hands-on expertise with GitLab and Harness, including pipeline configuration, release orchestration, and deployment strategies.

Embed engineering quality, security, and compliance checks within pipelines to support consistent and repeatable delivery outcomes.

Support teams in adopting CI/CD best practices, improving deployment reliability and reducing manual intervention.
