

Here's a revised and enhanced version of your resume, aiming for a professional tone and improved flow:

****MADDULA SIDDARDHA****

Hyderabad, Ameerpet | +91- 9177339503 | LinkedIn: <https://linkedin.com/in/siddu-009> |

Gmail: siddardha9988@gmail.com | GitHub: github.com/Siddu-009

****Summary****

Highly motivated DevOps Engineer with a strong foundation in cloud infrastructure, automation, and containerization technologies. I specialize in designing and implementing scalable deployment pipelines, leveraging AWS services for efficient operations, and ensuring robust monitoring solutions. I am passionate about streamlining processes and fostering collaborative environments through innovative technology solutions.

****Technical Skills****

- * ****Cloud Platforms:**** AWS (EC2, S3, IAM, VPC, RDS, Route 53, EKS, CloudWatch)
- * ****Containerization & Orchestration:**** Docker, Kubernetes (EKS), Helm
- * ****Infrastructure as Code:**** Terraform, Ansible
- * ****DevOps Tools:**** Jenkins, ArgoCD, Git, Maven, SonarQube, Nexus
- * ****Monitoring & Observability:**** Prometheus, Grafana, AWS CloudWatch
- * ****Web Technologies:**** Apache, Nginx, Tomcat, MySQL (Amazon RDS)
- * ****Scripting/OS:**** Linux (Ubuntu, RHEL), Bash Shell Scripting

****Experience****

****CI/CD Pipeline Engineer – E-commerce Application****

- * Designed and implemented a comprehensive CI/CD pipeline using Jenkins, reducing deployment time by 40%.
- * Automated AWS infrastructure provisioning (VPC, EC2 Linux servers, S3, RDS, IAM) with Terraform, streamlining the deployment process.
- * Deployed applications on Linux servers utilizing Ansible with Tomcat and Nginx configuration, ensuring consistent application delivery.
- * Implemented secure credential management using Ansible Vault and automated build artifact versioning in Amazon S3, enhancing data security and reliability.
- * Developed and implemented Prometheus and Grafana dashboards for real-time monitoring of CPU, memory, disk usage, and application availability.
- * Successfully automated a fully functional CI/CD pipeline for an E-commerce application, enabling faster, secure, and reliable deployments with continuous monitoring and infrastructure automation.

****Containerized Application Deployment – Kubernetes****

- * Automated AWS EKS cluster creation using Terraform and managed Linux-based container workloads.

- * Developed and deployed microservices using Docker to ensure consistent deployment across environments and pushed them to a private Docker registry.
- * Implemented Helm charts and GitOps-based deployments using Argo CD, establishing automated rollback mechanisms and continuous delivery practices.
- * Configured Horizontal Pod Autoscaler (HPA) for automatic scaling based on demand, optimizing resource utilization and application responsiveness.
- * Implemented Kubernetes namespaces, RBAC, and resource quotas to ensure secure workload isolation and management.
- * Configured Prometheus and Grafana dashboards for real-time monitoring of Kubernetes workloads and cluster nodes.

****Education****

****Bachelor of Technology (B.Tech)**** – Sir C R Reddy College of Engineering | 2025

****Strengths****

- * Strong analytical and problem-solving skills
- * Effective communication, collaboration, and adaptability
- * Quick learner with a demonstrated aptitude for new technologies
- * Excellent time management and task prioritization abilities
